* main brand colour

This is Cadet Vocational College's primary colour palette and colourway. It consists of both the colour referencing for print and web safe colours.

The opacity of a colour may be adjusted when used over the top of a photograph.

Colour references for print
Artwork files and images that are to be used for commercial printing, must be created using CMYK (not RGB) for colours to print correctly. Please ensure that all colours used in the design of your print-ready artwork file (including font colours) are made up of CMYK values.

Web safe colours
Digital artwork should be set up using an RGB colour space.

Web safe colours are only used in designing web pages, and the methods for describing and specifying those colors. Hexadecimal color codes begin with a hash (#).
